

SQL CASE-STUDY

TITLE : DANNY'S DINER ANALYSIS

BY :
DENIS M

INTRODUCTION

Danny seriously loves Japanese food so in the beginning of 2021, he decides to embark upon a risky venture and opens up a cute little restaurant that sells his 3 favorite foods: sushi, curry and ramen.

Danny's Diner is in need of assistance to help the restaurant stay afloat - the restaurant has captured some very basic data from their few months of operation but have no idea how to use their data to help them run the business.

-- 1. What is the total amount each customer spent at the restaurant?

```
SELECT s.customer_id, SUM(m.price) AS total_amount
FROM sales s
JOIN menu m
      ON s.product_id=m.product_id
GROUP BY s.customer_id;
```

-- 2. How many days has each customer visited the restaurant?

```
SELECT customer_id, COUNT(DISTINCT order_date) AS days  
FROM sales  
GROUP BY customer_id;
```

-- 3. What was the first item from the menu purchased by each customer?

```
WITH CTE AS (  
  SELECT s.customer_id,s.product_id,m.product_name,  
  ROW_NUMBER() OVER(PARTITION BY s.customer_id ORDER BY s.order_date) AS num  
  FROM sales s  
  JOIN menu m  
  ON s.product_id=m.product_id)  
SELECT customer_id,product_name  
FROM CTE  
WHERE num=1;
```

-- 4. What is the most purchased item on the menu and how many times was it purchased by all customers?

```
SELECT m.product_name,COUNT(*) AS purchase_count
FROM sales s
JOIN menu m
ON s.product_id=m.product_id
GROUP BY m.product_name
ORDER BY purchase_count DESC
LIMIT 1;
```

-- 5. Which item was the most popular for each customer?

```
WITH CTE AS (  
  SELECT s.customer_id,m.product_name,COUNT(product_name) AS product_count,  
  ROW_NUMBER() OVER(PARTITION BY customer_id ORDER BY COUNT(product_name) DESC) AS num  
  FROM sales s  
  JOIN menu m  
  ON s.product_id=m.product_id  
  GROUP BY s.customer_id,m.product_name)  
SELECT customer_id,product_name  
FROM CTE  
WHERE num=1;
```

-- 6. Which item was purchased first by the customer after they became a member?

```
WITH CTE AS (  
  SELECT s.customer_id,s.order_date,s.product_id,m2.product_name,  
         ROW_NUMBER() OVER(PARTITION BY customer_id ORDER BY order_date) AS num  
  FROM sales s  
  JOIN members m  
  ON s.customer_id = m.customer_id  
  JOIN menu m2  
  ON s.product_id=m2.product_id  
  WHERE s.order_date > m.join_date)  
SELECT customer_id,product_name  
FROM CTE  
WHERE num=1;
```

-- 7. Which item was purchased just before the customer became a member?

```
WITH CTE AS (  
  SELECT s.customer_id, s.order_date, s.product_id, m2.product_name,  
         ROW_NUMBER() OVER(PARTITION BY customer_id ORDER BY order_date ) AS num  
  FROM sales s  
  LEFT JOIN members m  
    ON s.customer_id = m.customer_id  
  JOIN menu m2  
    ON s.product_id=m2.product_id  
 WHERE s.order_date < m.join_date)  
SELECT customer_id, product_name  
FROM CTE  
WHERE num=1;
```

-- 8. What is the total items and amount spent for each member before they became a member?

```
SELECT s.customer_id, COUNT(s.product_id) AS Total_items, SUM(m.price) AS Spent_amount
FROM sales s
JOIN menu m
ON s.product_id=m.product_id
JOIN members m2
ON s.customer_id=m2.customer_id
WHERE s.order_date < m2.join_date
GROUP BY s.customer_id
ORDER BY s.customer_id;
```

-- 9. If each \$1 spent equates to 10 points and sushi has a 2x points multiplier - how many points would each customer have?

```
WITH CTE AS (  
  SELECT s.customer_id,m.product_name,SUM(m.price) AS Spent_amount,  
  CASE  
    WHEN product_name="sushi" THEN SUM(m.price)*20  
    ELSE SUM(m.price)*10  
  END AS Points  
  FROM sales s  
  JOIN menu m  
  ON s.product_id=m.product_id  
  GROUP BY s.customer_id,m.product_name)  
SELECT customer_id,SUM(Points) AS Points  
FROM CTE  
GROUP BY customer_id;
```

-- 10. In the first week after a customer joins the program (including their join date) they earn 2x points on all items, not just sushi -
-- how many points do customer A and B have at the end of January?

```
WITH CTE AS (  
  SELECT s.customer_id,s.order_date,m2.join_date,m.product_name,SUM(m.price) AS Spent_amount,  
  CASE  
    WHEN s.order_date BETWEEN m2.join_date AND DATE_ADD(m2.join_date, INTERVAL 7 DAY) THEN SUM(m.price)*20  
    ELSE SUM(m.price)*10  
  END AS Initial_points  
  FROM sales s  
  JOIN menu m  
  ON s.product_id=m.product_id  
  JOIN members m2  
  ON s.customer_id=m2.customer_id  
  WHERE MONTH(s.order_date)=1  
  GROUP BY s.customer_id,s.order_date,m2.join_date,m.product_name  
  ORDER BY s.customer_id,s.order_date)  
SELECT customer_id,SUM(Initial_points) AS Points  
FROM CTE  
GROUP BY customer_id;
```

-- Bonus Questions

-- creating basic data tables

```
SELECT s.customer_id,s.order_date,m.product_name,m.price,  
IF(s.order_date>=m2.join_date ,"Y","N") AS member  
FROM sales s  
LEFT JOIN menu m  
ON s.product_id=m.product_id  
LEFT JOIN members m2  
ON s.customer_id=m2.customer_id  
ORDER BY s.customer_id,s.order_date,m.product_name;
```

-- Ranking of customers excluding non-member purchases

```
WITH CTE AS (  
  SELECT s.customer_id,s.order_date,m.product_name,m.price,  
  IF(s.order_date>=m2.join_date ,"Y","N") AS member  
  FROM sales s  
  LEFT JOIN menu m  
  ON s.product_id=m.product_id  
  LEFT JOIN members m2  
  ON s.customer_id=m2.customer_id  
  ORDER BY s.customer_id,s.order_date,m.product_name)  
  SELECT *,  
  CASE  
  WHEN  member="Y" THEN RANK() OVER(PARTITION BY customer_id,member ORDER BY order_date)  
  ELSE "NULL"  
  END AS Ranking  
  FROM CTE;
```

INSIGHTS

- Customer A spent most amount \$76 followed by Customer B-\$74
- Customer B is the most frequent customer
- ramen is the most purchased item with 8 times.
- Popular item for each customer A-ramen, B-curry, C-ramen
- Customer A purchase percentage increased to 104% and B decreased by 15% after becoming a member
- Customer preference changed after they becoming a member.
- Customer B leads points table base on purchase value and product value with 940 points and A with 860 and C with 360 points.
